SLICs

Directions, one step at a time

The directions PDFs are now steps you read in the app. Look up a SLIC, tap **Directions** and get the route, how to get in, and any maps of the yard. 65 SLICs have a route so far, and you can add the ones you know.

Read the directions

1. **Look up the SLIC** and tap **Directions** on its card. The route opens as numbered steps, with how to get in at the end.
2. **More than one way?** Tap the one you take at the top, like **Way 2** or **Way back**. SLICs remembers it for next time.
3. **Tap Step by step** for one big step at a time, with **Back** and **Next** buttons your thumb finds without looking. **Read aloud** says each step out loud.
4. **Tap Print** to print the directions, or save them as a PDF.

> ⚠ **Don't use your phone while driving.** Read the steps before you pull out, or while you're stopped. While the directions are open, your screen stays on.

What else is in there

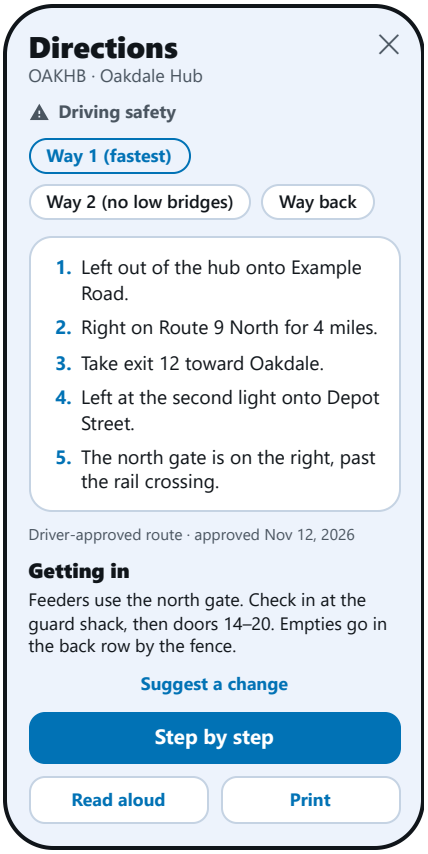

- **Getting in.** Which gate, where to check in, where the empties go.
- **Maps & documents.** Photos and PDFs such as a railyard map. Tap a photo to see it full screen.
- **Where the route came from.** "From the original directions PDF", or "Driver-approved route" with the date it was approved.
- **Original PDF** still opens the old sheet, for the SLICs that had one.

Open map or Directions?

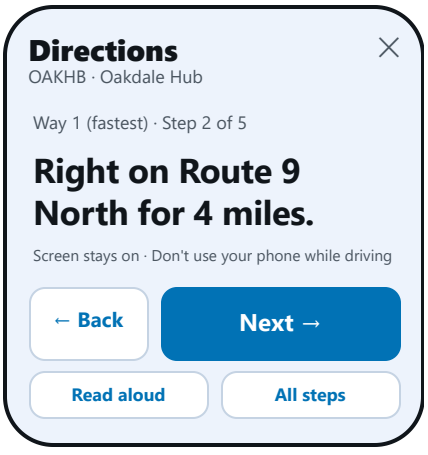

- **Open map** sends the address to Google Maps or Apple Maps, which route you like a car. Map routes may not be truck-friendly.
- **Directions** is the route written down for that SLIC. Roads change, so if a step looks wrong or you're unsure, ask dispatch.
- No Directions button? A SLIC may still show **PDF** instead, which opens the old sheet. No button at all means nobody has written the way yet.

Know a better way? Send it in.

Tap **Suggest a change** under the steps, or **Know the way? Add directions** under a SLIC that has none. Write one step per line. A line ending in a colon, like "Way back:", starts another way. Say why if you like, then tap **Send to an admin**. An admin checks it before drivers see it. Leave gate codes out: every driver would see them.

Every step on one screen.

Step by step. The SLIC and its route are made up.
